USER MANUAL

POWERING THE
MODULE

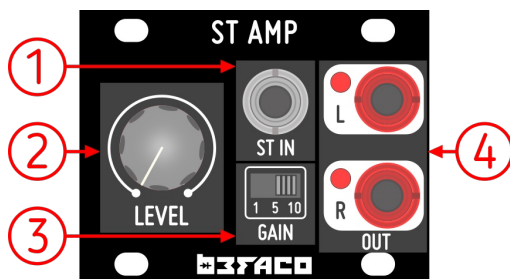

THANKS FOR PURCHASING A MODULE FROM BEFACO!
BEFORE YOU PLUG THIS MODULE IN...

1. **Disconnect your cabinet from the mains.**
2. **Triple check the power cord polarity.** The coloured line on the cable (pin number one) is the -12V rail.
3. If you plug the module backwards you might burn it out and unfortunately this is not covered by the warranty.
4. If you have any questions about this product please send them to: support@befaco.org

INTRODUCTION | ST AMP

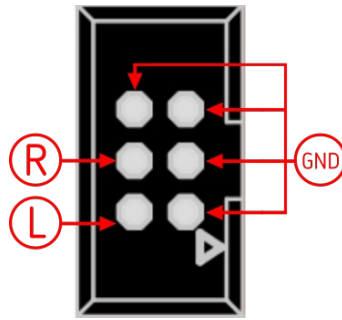

ST Amp is a 1U stereo amplifier designed to boost your external signals into modular levels. The module is designed under the Intellijel 1U format and uses the same pinout, making it fully compatible with the Intellijel case's rear connectors.

MODULE
REFERENCE | PANEL OVERVIEW

1. Stereo Input
Module's audio input. This input is AC coupled to improve audio performance.
2. Level Knob
Manual input attenuation
3. Gain Selector
Selects between x1, x5 or x10 amplification boost.
4. Stereo Outputs
Audio outputs with dedicated vu-meter LEDs.

FEATURES | CONNECTING THE UNIT TO A CASE

ST Amp inputs can be linked to the rear Jack connectors found in cases like the Befaco 7U Case or Intellijel 7U and Palette series. To do that, connect both ends of the provided 2x3 ribbon cable to both the "INPUT" socket placed at the back of the module and the socket of your case (please refer to the User Manual of your case to identify the socket linked to the rear jacks).
